## **Action Taken Report**

**On**

**National Level Workshop on “The Cult Of Terror, Along with Cyber Crimes”**

**Academic Year 2023-24**

**Activity:** National Level Workshop on “The Cult Of Terror, Along with Cyber Crimes”

**Aim:** To provide a risk-free and secure environment in which data, networks, and devices can be protected from cyber-attacks.

**Notice:** The leaflet is attached with this action taken report.

**Date:** 23- August -2023.

**Name of President:** Prof. (Dr.) Meena T. Nikam, Principal, Shri Shivaji Science and Arts College, Chikhli. Dist.: Buldhana M.S. 443201.

**Convener:** Dr. A. B. Kadam, HOD of Computer Science

**Organizing Secretary:** Dr. M. E. Jadhav

**Organizing Secretary:** Dr. S. S. Gaikwad

**Number of participants:** 214 (Online/Offline) (Online: - 120) (Offline: - 94)

## Action Taken: -

Shri Shivaji Science & Arts College, Chikhli, Dist-Buldhana. The Department of Computer Science has conducted a **National Level Workshop on “The Cult Of Terror, Along with Cyber Crimes”**, on **23 August 2023 at 11:30 AM** to Onwards. This activity is based on under the department Best practices. Cyber Security is the best practice of our computer science department.

**Introduction:** Today, the world is more digitally connected than ever before. Criminals take advantage of this online transformation to target weaknesses in online systems, networks and infrastructure. There is a massive economic and social impact on governments, businesses and individuals worldwide. Phishing, ransomware and data breaches are just a few examples of current cyber threats, while new types of cybercrime are emerging all the time.

Cybercriminals are increasingly agile and organized – exploiting new technologies, tailoring their attacks and cooperating in new ways. Cybercrimes know no national borders. Criminals, victims and technical infrastructure span multiple jurisdictions, bringing many challenges to investigations and prosecutions. Close collaboration between public and private partners is therefore essential.

The technique of protecting internet-connected systems such as computers, servers, mobile devices, electronic systems, networks, and data from malicious attacks is known as cybersecurity. We can divide cybersecurity into two parts one is cyber, and the other is security. Cyber refers to the technology that includes systems, networks, programs, and data. Security is concerned with the protection of systems, networks, applications, and information. In some cases, it is also called electronic information security or information technology security.

Every organization's assets are the combinations of a variety of different systems. These systems have a strong cybersecurity posture that requires coordinated efforts across all of its systems. Therefore, we can categorize cybersecurity into the following sub-domains:

- **Network Security:** It involves implementing the hardware and software to secure a computer network from unauthorized access, intruders, attacks, disruption, and misuse. This security helps an organization to protect its assets against external and internal threats.
- **Application Security:** It involves protecting the software and devices from unwanted threats. This protection can be done by constantly updating the apps to ensure they are secure from attacks. Successful security begins in the design stage, writing source code, validation, threat modelling, etc. before a program or device is deployed.
- **Information or Data Security:** It involves implementing a strong data storage mechanism to maintain the integrity and privacy of data, both in storage and in transit.
- **Identity management:** It deals with the procedure for determining the level of access that each individual has within an organization.

- **Operational Security:** It involves processing and making decisions on handling and securing data assets.
- **Mobile Security:** It involves securing the organizational and personal data stored on mobile devices such as cell phones, computers, tablets, and other similar devices against various malicious threats. These threats are unauthorized access, device loss or theft, malware, etc.
- **Cloud Security:** It involves in protecting the information stored in the digital environment or cloud architectures for the organization. It uses various cloud service providers such as AWS, Azure, Google, etc., to ensure security against multiple threats.
- **Disaster Recovery and Business Continuity Planning:** It deals with the processes, monitoring, alerts, and plans to how an organization responds when any malicious activity is causing the loss of operations or data. Its policies dictate resuming the lost operations after any disaster happens to the same operating capacity as before the event.
- **User Education:** It deals with the processes, monitoring, alerts, and plans to how an organization responds when any malicious activity is causing the loss of operations or data. Its policies dictate resuming the lost operations after any disaster happens to the same operating capacity as before the event.

### **Importance of Cyber Security**

Today we live in a digital era where all aspects of our lives depend on the network, computers and other electronic devices, and software applications. All critical infrastructures such as the banking system, healthcare, financial institutions, governments, and manufacturing industries use devices connected to the Internet as a core part of their operations. Some of their information, such as intellectual property, financial data, and personal data, can be sensitive to unauthorized access or exposure that could have negative consequences. This information gives intruders and threat actors to infiltrate them for financial gain, extortion, political or social motives, or just vandalism.

Cyber-attack is now an international concern that hacking the system, and other security attacks could endanger the global economy. Therefore, it is essential to have an excellent cybersecurity strategy to protect sensitive information from high-profile security breaches. Furthermore, as the volume of cyber-attacks grows, companies and organizations, especially those that deal with information related to national security, health, or financial records, need to use strong cybersecurity measures and processes to protect their sensitive business and personal information.

The participant's response is as follows:

## Action Taken on Feedback Analysis

### Suggestions, comments and Actions taken:

- 1) We are improving our other workshop content as per the participant's feedback.
- 2) As per the participant's feedback, we have to plan to organize such types of events in the future.
- 3) As per the participant's request, we have share PPT with the participants.
- 4) As per the participant's suggestion we will organize such a workshop on offline/online mode with a practical approach.
