C Language Overview

This chapter describes the basic details about C programming language, how it was developed, what are strengths of C and why we should use C.

The C programming language is a general-purpose, high-level language originally developed by Dennis M. Ritchie to develop the UNIX operating system at Bell Labs. C was originally first implemented on the DEC PDP-11 computer in 1972.

In 1978, Brian Kernighan and Dennis Ritchie produced the first publicly available description of C, now known as the K&R standard.

The UNIX operating system, the C compiler, and essentially all UNIX applications have been written in C. The C has now become a widely used professional language for various reasons.

- Easy to learn
- Structured language
- It produces efficient programs.
- It can handle low-level activities.
- It can be compiled on a variety of computer platforms.

Facts about C

- C was invented to write an operating system called UNIX.
- C is a successor of B language, which was introduced around 1970.

Slide 10 | 150%

• Today, C is the most widely used and popular System Programming Language.

• Most of the state-of-the-art softwares have been implemented in C.

• Today's most popular Linux OS and RDBMS MySQL are written in C.

Why to use C?

C was initially used for system development work, in part because it was designed to be portable across different operating systems. C was adopted as a system development language because it produces code that runs nearly as fast as code written in assembly language. Here are some examples of the use of C might be:

- Operating Systems
- Language Compilers
- Assemblers
- Text Editors
- Print Spoolers
- Network Drivers
- Modern Programs
- Databases
- Language Interpreters
- Utilities

Introduction

- ✓ C is a general purpose language which is very closely associated with UNIX for which it was developed in Bell Laboratories.
- ✓ Most of the programs of UNIX are written and run with the help of 'C'.
- ✓ Many of the important ideas of 'c' stem are from BCPL by Martin Richards.
- ✓ In 1972, Dennies Ritchie at Bell Laboratories wrote C Language which caused a revolution in computing world .
- ✓ From beginning C was intended to be useful for busy programmers to get things done easily because C is powerful,dominant and supple language.

Why Name 'C' was given to this language?

- ❖ Many of the ideas of C language were derived and taken from 'B' language.
- ❖ BCPL and CPL are previous versions of 'B' language.
- ❖ As many features came from B it was named as 'C'.
